# Introduction

Welcome! The aim of this document is to illustrate the team's brand identity, brainstorming and sketching workflows both used for video and photo preproduction. Enjoy the read!

## The brand identity

The team name "NaoNexus" comes from two different words: "Nao", the name of the robot we used, while "Nexus" means nexus in both Latin and English. On focus, the second word, points at how the team strives to be nexus of a bigger project, a middleman between the intricate and complicated world of software and technology, and a frictionless, easy and effortless end-goal user experience.

## Meaning of the logo

"Nexus" is the pivot point of our idea, to be nexus of something. Hence, the base layer of the logo is NAO's head, to symbolize the mean through which we work. On top, the "N"s compose the initials of our name, layered one opposed to another, almost as if one completed the other, meaning that technology (NAO) will never live without its application (Nexus), and vice versa.

The chosen color scheme is a cyan-orange one, presenting two different shades of cyan, a light one and a dark one, used respectively for the base layer of the logo and the first "N". The orange, close to coral color, is used as accent color and for the second "N" in the logo. This color was intentionally thought to symbolize the message of complementarity not only with the layout of the letters, but also with the color scheme.

This color scheme, inspired by the "orange & teal vibe", is used in every graphic element and official, non-scientific documents.

In 2023, the team decided to add to the bottom-right corner of the logo two leaves, to highlight our attention to sustainability.

# Brainstorming logo

A basic preliminary sketch of the NaoNexus logo:

# Types of multimedia content

If last year we aimed for a quantum leap in post quality, lexical complexity and graphic continuity, this year the mission is to create a stable presence on social media, delivering the same, if not better quality of last year, but offering a wider range of content and more constant uploads and interactions, maximizing audience impression and viewer flows.

The types of content released this year are the following:

1. Traditional videos:
  1. Team presentation
  2. Project presentation
  3. Project proof of concept video
2. Instagram Reels and TikTok:
  1. Funny reels
  2. Green Nao format
3. Instagram Posts and Stories:
  1. "Reportage" style photos
  2. Team member biographies
  3. Informative and educational carousels

## Diversification of audience flows

The types of multimedia content thought for this year were created especially to maximize audience flows, to allow more people to be interested in our content, hence bringing more views, impression and likes to our social threads. The content segmentation was the following:

1. Occasional viewers: funny, non-educational and entertaining content
2. Recurrent viewers: educational, high-quality and informative content

Through occasional viewers we were able to build a strong, instantaneous impression, in order to promote our more educational content, like the GreenNao format, or educational carousels.

The result of this combination was an overall improved Instagram impression, with more likes, more taps on our external links and more interaction with the overall community.

# Short-term content

Short-term content formats were the following:

1. Instagram Reels and TikTok:
  1. Funny Reels
2. Instagram Posts and Stories:
  1. "Reportage" style photos

Funny reels were mainly thought following mainstream TikTok trends, like "proof that anything can be an album cover", or the Nicholas Cage and Pedro Pascal meme.

"Reportage" style photos, for how elaborate and high-quality could have been, have been inserted in this category because they weren't of informative or educational value to the average user. Nonetheless, they were a very useful tool to inform our fan base about our current achievements and overall progress.

Meme

# Long-term content

Long-term content was the following:

1. Traditional videos:
  1. Team presentation
  2. Project presentation
  3. Project proof of concept
2. Instagram Reels and TikTok:
  1. Green Nao format
3. Instagram Posts and Stories:
  1. Team member biographies
  2. Informative and educational carousels

The first three videos made for the NaoChallenge, were helpful tools to easily explain in-depth concepts this year's project, present our team and supply a tangible proof of concept of the NAO robot in its practical work environment.

The GreenNao format, first thought by professor Bellorio, was helpful to offer to the people of Verona a fast and easy way of getting to know the local endeavors in the field of sustainability. This way, local businesses in this field could be promoted, other than our project.

This format allowed us to collaborate with many associations and private firms, such as Legambiente Verona, AGSM Aim Verona (Verona's energy management company) and VeronaNetwork (with whom we hosted a short interview in their Radio/YouTube series Obiettivo Sostenibilità)

Instagram bio posts introduced our team members to the public. Instagram carousels, in two different color palettes, contributed to inform followers on which workflows we used to work more efficiently, in addition to the innovations that our project would include for this year.

# Workflow

Prior to the production of content, time tables and calendars were written to have a clear image of the editorial plan for each social media thread. The whole process was documented on Notion. Following this step, depending on the type of content chosen to produce, the following workflows were used:

## 1. Instagram and TikTok:

1. Sketching/Preliminary drawings of posts
2. Production of a template post on Photoshop or Illustrator
3. Customization of the template with captions and specific assets

## 2. YouTube:

1. Brainstorming phase
2. Writing the structure of the video
3. Complete pre-production with writing of a production book (you can find the full file on our GitHub)
4. Shooting of the video
5. Re-shoot, if necessary
6. Editing and revisions with the team

### 3. Short-term content:

1. Shooting
2. Editing
3. Direct upload and post

### Example of a Shot List in a Production Book

# Color palette table

In this section the color palette hex codes are fully listed and cataloged depending on the use. Note that these colors have been consistently used for official non-scientific documents, for our website, Instagram posts and graphic elements.

# Role subdivision

Roles were divided further into two distinct categories, depending on the type of work the social media team would address that day.

## On-set roles

On-set roles were specially thought to enable us to work efficiently, well and safely during set time:

- Alberto Rubini (Team Leader) - Director, Camera Operator
- Arianna Antonelli - Makeup Artist, Production Assistant
- Davide Masini - Audio Technician
- Antonio Galati - Logistics Manager

## Off-set roles

Off-set roles were used to divide workflow efficiently within the team when other types of tasks were needed to be finalized, such as editing or website development:

- Alberto Rubini (Team Leader) - Editor Foto e Video
- Arianna Antonelli - Social Media Manager
- Davide Masini - Website Developer
- Antonio Galati - Choreographe Developer
- Elisa D'Iseppi - Jolly

# Used fonts

Fonts used for the website:

1. **Libre Franklin Extra-Bold**
2. Montserrat Regular
3. **Barlow Bold**

Font used for the “NaoNexus” type:

1. **Arial Rounded MT Bold**
